PROFESSIONAL SUMMARY

Software engineer with 5+ years of experience designing, building, and maintaining production web applications and business systems. Works across the stack with TypeScript, React, and Next.js, C#/.NET Core with Entity Framework Core and SQL Server, and Node.js/Express APIs. At Deloitte & Touche, leads development of the web application for an enterprise payroll platform that cut payroll processing time by 35%, and built OCR document automation with Azure Document Intelligence that reduced manual data entry by 60%. Has delivered booking and payment systems for transport operators, an on-street parking platform, and a vendor management system, and is expanding into AI application engineering, building Python/FastAPI services for LLM integration and retrieval. Founder of WeRunAm, a Lagos logistics and errands platform.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), C#, SQL, Python, HTML, CSS

Backend & APIs: C#/.NET Core, ASP.NET Core, Entity Framework Core, Node.js, Express.js, REST APIs, GraphQL, WebSockets, payment APIs (Paystack, Monnify); FastAPI and Pydantic (personal projects)

Frontend: React, Next.js (SSR/SSG), Redux Toolkit, Zustand, React Query, RTK Query, Zod, Tailwind CSS, shadcn/ui, Astro

Databases: SQL Server, MongoDB, Firebase/Firestore, Supabase

Cloud & AI: Microsoft Azure, Azure Document Intelligence (OCR), Google Gemini API (generation and embeddings), AWS (S3, IAM), Vercel, Netlify

Testing & Practices: Jest, pytest, CI/CD, Git/GitHub, code review, API design, performance optimisation (Core Web Vitals), WCAG 2.1 accessibility, Agile/Scrum

Currently developing: Retrieval-augmented generation (RAG), embeddings and vector search, cloud-based AI systems

PROFESSIONAL EXPERIENCE

Software Engineer, Deloitte & Touche **Feb 2025 – Present**
Lagos, Nigeria (Hybrid)

- Lead development of the web application for Neptune, an enterprise payroll platform for the Tax & GES department, and maintain it in production; the platform reduced payroll processing time by 35%.
- Built OCR-based document automation with Azure Document Intelligence that reduced manual data entry by 60%.
- Integrate Next.js applications with Node.js/Express and ASP.NET APIs, working with backend engineers on API contracts, data flow, and error handling.
- Improved application load performance by 25% (Largest Contentful Paint) through server-side rendering, caching, code splitting, and lazy loading.
- Led accessibility improvements against WCAG 2.1 guidelines; take part in code reviews and maintain technical documentation.

Software Engineer, T40 Technologies **Apr 2024 – Nov 2024**
Remote | Software for Nigerian intercity transport operators (Intercity NG)

- Built a reusable, white-label booking website template for transport operators in Next.js with online ticket purchase, real-time seat availability, and schedule management; adopted by two operators and associated with a 40% increase in booking conversions.
- Integrated Paystack and Monnify payment APIs with a Laravel backend to support online ticket checkout.
- Implemented React Query and WebSockets to keep seat availability and booking data current without manual refreshes.
- Single-handedly built the charter booking feature for Intercity NG, letting customers request and book chartered vehicles online.
- Developed the Intercity NG consumer booking web app and the T40 corporate website, applying SSR, caching, technical SEO, and analytics tracking.

Software Engineer, Najec Limited **Oct 2023 – Mar 2024**
Hybrid

- Led development of the web application for an enterprise on-street parking management system, including admin dashboards for operational monitoring.
- Designed and launched the company website with technical SEO and performance optimisation, increasing organic traffic to the landing page by 70%.

Software Engineer, Tenece Professional Services **Jan 2021 – Sep 2023**
Hybrid

- Developed a Vendor Management System, the team's major project, using C#, ASP.NET Core, Entity Framework Core, and SQL Server.
- Implemented application features and data access with Entity Framework Core over SQL Server, delivering backend and business logic for vendor management workflows.

SELECTED PROJECTS

AI Gateway API (in progress) | github.com/IsraelChidera/AI-Gateway-API | Python, FastAPI, Pydantic, Google Gemini API, pytest

- Built a FastAPI service that exposes LLM chat behind a provider-agnostic interface, with a Gemini provider and a deterministic mock provider for testing; each response returns token usage and latency.
- Implemented resilience patterns: per-request timeouts, retries with exponential backoff and jitter on 429 and 5xx errors, and a typed error hierarchy mapped to 504, 503, and 429 responses with Retry-After headers.
- Prototyped retrieval with overlapping text chunking, Gemini embeddings, and cosine-similarity top-k search; covered the API and providers with pytest and pytest-asyncio tests.

Neptune Payroll Platform (internal, Deloitte & Touche) | Next.js, TypeScript, Azure Document Intelligence, Node.js/Express, ASP.NET APIs

- Led development of the web application for an internal payroll system serving the Tax & GES department, from application architecture to backend API integration, and own its ongoing maintenance.
- Designed an OCR intake flow in which payroll documents are processed by Azure Document Intelligence and extracted data is surfaced in the application, replacing manual data entry.

WeRunAm | werunam.com | Founder and engineer | Next.js, Firebase, RTK Query, Paystack

- Founded and built the web platform for a Lagos errands, market-sourcing, and logistics service, with request flows for market runs, errands, airport item recovery, and import and export shipments.
- Designed a quote-then-pay customer flow for a low-trust market: itemised quotes before payment, Paystack checkout, photo and video updates before dispatch, and a defined dispute and refund process.

EDUCATION

Master of Technology (M.Tech.), Miva Open University **May 2026 – Expected May 2027**
In progress

B.Sc., Microbiology/Biochemistry, University of Nigeria, Nsukka **2019**
Enugu, Nigeria

CERTIFICATIONS

- AWS Certified AI Practitioner (AIF-C01), Amazon Web Services | In preparation, exam planned January 2027
- React Learning Program, Andela | Completed Oct 2023

TECHNICAL WRITING & COMMUNITY

- Author, freeCodeCamp News: published tutorials including protecting routes in Next.js and Firebase Authentication in React (freecodecamp.org/news/author/israelchidera).
- Mentor, Uptick Talent Africa: mentor aspiring software engineers within a community of 500+ tech professionals.
